

COURSE DESCRIPTION

1. Program identification information

1.1 Higher education institution	National University of Science and Technology Politehnica Bucharest
1.2 Faculty	Electronics, Telecommunications and Information Technology
1.3 Department	Electronic Devices, Circuits and Architectures
1.4 Domain of studies	Electronic Engineering, Telecommunications and Information Technology
1.5 Cycle of studies	Masters
1.6 Programme of studies	Advanced Microelectronics

2. Date despre disciplină

2.1 Course name (ro) (en)	Probleme specifice în proiectarea circuitelor analogice și a celor de putere inteligente Special Topics in Analog and Smart Power Design						
2.2 Course Lecturer	Prof. Martin Pfof - TU Dortmund, Dr. Andrei DANCHIV - Infineon						
2.3 Instructor for practical activities	NA						
2.4 Year of studies	2	2.5 Semester	1	2.6. Evaluation type	E	2.7 Course regime	Ob
2.8 Course type	DA	2.9 Course code	UPB.04.M3.O.04-38		2.10 Tipul de notare	Nota	

3. Total estimated time (hours per semester for academic activities)

3.1 Number of hours per week	2	Out of which: 3.2 course	2	3.3 seminary/laboratory	0
3.4 Total hours in the curricula	28	Out of which: 3.5 course	28	3.6 seminary/laboratory	0
Distribution of time:					hours
Study according to the manual, course support, bibliography and hand notes Supplemental documentation (library, electronic access resources, in the field, etc) Preparation for practical activities, homework, essays, portfolios, etc.					45
Tutoring					0
Examinations					2
Other activities (if any):					0
3.7 Total hours of individual study	47.00				
3.8 Total hours per semester	75				
3.9 Number of ECTS credit points	3				

4. Prerequisites (if applicable) (where applicable)

4.1 Curriculum	Gaduation of the following courses: <ul style="list-style-type: none">• Analog Blocks• Advanced Analog Blocks• Microcontrollers and Embeded Systems• Advanced Digital Design• Power Semiconductor Devices• Automotive Sensors
4.2 Results of learning	Following knowledge is required: <ul style="list-style-type: none">• Semiconductor device operation• Solid state physics• Automotive electronics design methodologies• Analog Design• Digital Design• IC manufacturing

5. Necessary conditions for the optimal development of teaching activities (where applicable)

5.1 Course	<ul style="list-style-type: none">• Course classes will take place in a classron having videoprojector and computer.• For synchronous broadcasting/recording, high speed Internet connection is necessary.
5.2 Seminary/ Laboratory/Project	NA

6. General objective (*Reffering to the teachers' intentions for students and to what the students will be thought during the course. It offers an idea on the position of course in the scientific domain, as well as the role it has for the study programme. The course topics, the justification of including the course in the curricula of the study programme, etc. will be described in a general manner*)

This topic is studied in the Electronics, Telecommunication and Information Technology domain / Advanced Microelectronics Master Program and aims to present and analyze „smart power” technologies and main aspects of special analog design for the automotive industry. High voltage circuits are also presented,

7. Competences (*Proven capacity to use knowledge, aptitudes and personal, social and/or methodological abilities in work or study situations and for personal and proffesional growth. They reflect the employers requirements.*)

<p>Specific Competences</p>	<p>The student completing this course will be able to: Understand circuits which are used inside integrated Smart Power designs Know about Smart Power and high voltage technologies and Understand parasitic behavior Master ways to improve analog circuit robustness. Correlates knowledge Applies knowledge Applies standard methods and instruments specific to the domain in order to evaluate and diagnose the status of the task to be performed and, based on the conclusions identified/reported identifies solutions. Analizes and arguments coherently and correctly the base knowledge application context using key concepts and specific methodology. Oral and written communication in Romanian language: uses appropriate scientific vocabulary in order to effectively communicate. Oral and written communication in English language: demonstrates specific vocabulary mastering.</p>
<p>Transversal (General) Competences</p>	<p>Works in a team and efficiently communicates, coordinating her/his efforts to others efforts in order to solve medium size/complexity issues. Autonomy and critical thinking: ability to think using appropriate scientific terms, to independently search and analyze data and to draw and present conclusions / identify solutions. Analysis and synthesis ability: synthetically presents acquired knowledge via systematic analysis. Follows academic ethics: in the documentation activity properly cites the bibliographical sources.</p>

8. Learning outcomes (*Synthetic descriptions for what a student will be capable of doing or showing at the completion of a course. The learning outcomes reflect the student's accomplishments and to a lesser extent the teachers' intentions. The learning outcomes inform the students of what is expected from them with respect to performance and to obtain the desired grades and ECTS points. They are defined in concise terms, using verbs similar to the examples below and indicate what will be required for evaluation. The learning outcomes will be formulated so that the correlation with the competences defined in section 7 is highlighted.*)

<p>Knowledge</p>	<p><i>The result of knowledge acquisition through learning. The knowledge represents the totality of facts, principles, theories and practices for a given work or study field. They can be theoretical and/or factual.</i></p> <ul style="list-style-type: none"> • Understands the specifics of “smart power” automotive electronics from both system level and component level; • Master high voltage • Interprets the specification of an automotive electronic system and its component; • Applies the automotive electronics system design methodology • Defines domain specific terms. • Describes/classifies terms/processes/phenomena/structures. • Points out relations and consequences.
-------------------------	---

Skills	<p><i>The capacity to apply the knowledge and use the know-how for completing tasks and solving problems. The skills are described as being cognitive (requiring the use of logical, intuitive and creative thinking) or practical (implying manual dexterity and the use of methods, materials, tools and instrumentation).</i></p> <ul style="list-style-type: none"> • Selects and groups relevant information in a specific context. • Uses specific principles, based on arguments, in order to effectively design chips and achieve the “first-time-success” goal. • Works productively in a team. • Elaborates scientific texts. • Experimentally verifies identified solutions. • Solves practical applications. • Correctly interprets de causality connections. • Analyses and compares different design styles. • Identifies solutions and elaborates solution plans/projects. • Draws conclusions from the experiments. • Arguments identified solutions.
Responsability and autonomy	<p><i>The student's capacity to autonomously and responsibly apply their knowledge and skills.</i></p> <ul style="list-style-type: none"> • Selects appropriate bibliography and analyses it. • Follows academic ethics, correctly citing sources. • Proves receptivity for new learning contexts. • Collaborates with her/his colleagues and teachers during the didactic process. • Proves autonomy in setting up teaching/solving problem context/. • Proves social responsibility by actively involving in student social live/implication in academic community events. • Promotes/contributes to social live improvement by new solutions in her/his specialization domain • Is aware of her/his contribution in engineering field, in identifying viable/sustainable solutions to solve socio-economic issues (social responsibility). • Applies ethical principles/professional deontology in analysis of environmental effects of proposed technological solutions. • Analyzes and exploits business opportunities /entrepreneurial development in the domain. • Proves management abilities in real life situations (time management collaboration vs. conflict).

9. Teaching techniques (*Student centric techniques will be considered. The means for students to participate in defining their own study path, the identification of eventual fallbacks and the remedial measures that will be adopted in those cases will be described.*)

Based on students’ study characteristics analysis and their specific needs, the teaching process will explore both exposing methods (lecture, exposition) and interactive dialogs, based pe on discovery teaching methods that are facilitated by direct reality exploration (experiment, demonstration, modelling), and also action based methods like exercises, practical activities and problem solving.

In the teaching activity exposition will be used based on both Power-Point and different recordings that will be available to the students. Each class will debut by reviewing previous chapters pointing out notions in the last previous class.

Presentations use images and graphs in order to facilitate notions understanding and assimilation.

This course covers information and practical activities aimed to support students in learning and optimal collaboration and communication relations development in an discovery learning favorable climate.

Active listening and assertive communication abilities practice and feedback will be main means to behavioral adjustment in various situations and for didactic activity adaptation to students' needs.

Team working abilities will be exercised in order to solve various learning tasks,

10. Contents

COURSE		
Chapter	Content	No. hours
1	1.1 Requirements and Limits of Power Semiconductors	2
2	1.2 PIN Diodes	2
3	1.3 Power MOSFETs and Superjunction MOSFETs	2
4	1.4 Integrated Smart Power Technologies	3
5	1.5 Insulated Gate Bipolar Transistors (IGBTs)	3
6	1.6 Wide-Bandgap Power Semiconductors	2
7	Overview Smart Power Technologies 2.1.1 Self Isolation 2.1.2 Junction Isolation 2.1.3 Dielectric Isolation 2.1.4 Application Examples	4
8	2.2. Diagnostic Circuits 2.2.1 Temperature Sensors 2.2.2 Reverse Current Problem 2.2.3 Robust Bandgap Reference Design 2.2.4 Current Measurement 2.2.5 Overvoltage Protection 2.2.6 Openload Detection	4
9	2.3. Driver Circuits 2.3.1 Low Side Driver 2.3.2 High Side Driver 2.3.3 Level Shifters 2.3.4 Charge-pumps 2.3.5 High Voltage Comparators 2.3.6 Linear Voltage Regulators	4
10	2.4, Packages for Smart Power Circuits	2
	Total:

Bibliography:

11. Evaluation

Activity type	11.1 Evaluation criteria	11.2 Evaluation methods	11.3 Percentage of final grade
11.4 Course	Fundamental theoretical notions knowledge		30
	Specific problems solving solutions for each integrated circuit design stage.		30
	Design methodologies and stages mastering,		40
11.5 Seminary/laboratory/project	NA		
11.6 Passing conditions			
Obtaining minimum 50% of the total score.			

12. Corroborate the content of the course with the expectations of representatives of employers and representative professional associations in the field of the program, as well as with the current state of knowledge in the scientific field approached and practices in higher education institutions in the European Higher Education Area (EHEA)

- Via the teaching activities, students get acquainted with automotive industry problems and solutions.
- In the course development both literature described aspects, knowledge and phenomena and own contributions published or acquired in industrial activities were used.
- The course has similar content to courses taught in: Lodz University of Technology, Poland, THE UNIVERSITY of EDINBURGH, Newcastle, Great Britain etc.

Universitatea Națională de Știință și Tehnologie Politehnica București
Facultatea de Electronică, Telecomunicații și
Tehnologia Informației

- The course was developed in cooperation with Infineon Technologies, Romania. Prof. Pfof is a teacher at Technische Universitat Dortmund and Dr. Danchiv is senior designer at Infineon Romania.

Date	Course lecturer	Instructor(s) for practical activities
25.09.2025	Dr. Andrei DANCHIV	NA

Date of department approval	Head of department
26.09.2025	Prof. Dr. Claudiu Dan 

Date of approval in the Faculty Council	Dean
26.09.2025	Prof. Dr. Mihnea Udrea
